PROFESSIONAL SUMMARY

DevOps Engineer with 9 months of hands-on production experience designing and maintaining CI/CD pipelines, provisioning cloud infrastructure on AWS using Terraform, and orchestrating containerized workloads on Kubernetes. Delivered automated deployment workflows that reduced manual intervention and improved release reliability for a microservices-based e-commerce platform. Experienced in GitOps, DevSecOps, monitoring, and Linux administration, with a strong focus on security, scalability, and operational best practices.

TECHNICAL SKILLS

Cloud Platforms: AWS (EKS, EC2, IAM, VPC, RDS, S3, ALB, ECR, CloudFront, CloudWatch)

Infrastructure as Code: Terraform (modules, remote state, workspaces), CloudFormation

CI/CD & GitOps: Jenkins, GitHub Actions, Argo CD

Containers & Orchestration: Docker, Kubernetes, Helm, AWS Fargate

Monitoring & Logging: Prometheus, Grafana, Datadog, AWS CloudWatch

Security & Code Quality: SonarQube, Trivy, OWASP Dependency-Check, IAM policies

Programming & Scripting: Bash (system admin, CI/CD automation), Python (scripting, operational tooling)

Version Control: Git, GitHub (webhooks, branching strategies)

Operating Systems: Linux (Ubuntu) – administration, shell scripting, process management

PROFESSIONAL EXPERIENCE

Hisan Labs

DevOps Engineer Intern

Sep 2025 – May 2026

Pune, Maharashtra, India

- Supported the deployment and operations of a microservices-based e-commerce application on AWS as part of a 4-member DevOps team, contributing to the full deployment lifecycle from infrastructure provisioning to production monitoring.
- Designed and maintained 3 Jenkins pipelines covering Terraform infrastructure provisioning, frontend deployments, and backend application deployments, eliminating manual deployment steps and standardising release workflows.
- Integrated SonarQube into CI/CD pipelines via GitHub webhooks, enabling automated code quality gates that blocked non-compliant builds before reaching staging and production environments.
- Developed and modified reusable Terraform modules to provision AWS resources including VPCs, Security Groups, S3 Buckets, RDS instances, and Amazon EKS clusters, improving infrastructure consistency across environments.
- Configured S3-backed Terraform remote state with state locking to support safe, concurrent infrastructure deployments across the 4-member team and prevent state conflicts.
- Wrote Bash and Python scripts to automate recurring operational tasks including log rotation, environment setup, and CI/CD workflow steps, reducing toil and manual intervention in deployment pipelines.
- Built and optimised multi-stage Docker images and deployed containerised applications on Amazon EKS using Kubernetes Deployments, Services, Ingress, ConfigMaps, Secrets, and Horizontal Pod Autoscalers.
- Administered Jenkins by managing plugins, credentials, and integrations with GitHub, Docker, Kubernetes, AWS, and Maven, maintaining a reliable and secure CI/CD platform for the team.
- Managed AWS IAM users, roles, and policies following least-privilege principles, ensuring secure and auditable access to cloud resources across development and production environments.
- Monitored application and infrastructure health using Prometheus, Grafana, Datadog, and AWS CloudWatch dashboards, supporting proactive incident detection and resolution.

PROJECTS

Three-Tier DevSecOps Project on AWS EKS | Jenkins, Terraform, Argo CD, Docker, Kubernetes, AWS | [GitHub](#)

- Deployed a production-grade full-stack MERN e-commerce application on Amazon EKS using Kubernetes Deployments, Services, StatefulSets, and AWS Load Balancer Controller-based Ingress for external traffic routing.
- Built and maintained a Jenkins CI/CD pipeline with integrated DevSecOps stages: SonarQube static code analysis, OWASP dependency scanning, and Trivy container image scanning – all enforced prior to deployment.
- Implemented GitOps-based application delivery using Argo CD, enabling automated synchronisation of Kubernetes cluster state with Git repository changes and eliminating manual `kubectl` deployments.

- Provisioned all AWS infrastructure – VPC, EKS, EC2, ECR, and IAM – using modular, reusable Terraform configurations, enabling consistent and repeatable environment creation.
- Configured Prometheus and Grafana via Helm charts to monitor EKS cluster health, node resource utilisation, and application performance metrics across all deployed services.

Go Cloud-Native GitOps Delivery Pipeline | *GitHub Actions, Argo CD, Docker, Kubernetes, AWS EKS* | [GitHub](#)

- Engineered an end-to-end GitOps CI/CD pipeline for a Go web application using GitHub Actions for CI and Argo CD for continuous delivery to Amazon EKS, enabling fully automated and auditable deployments.
- Developed multi-stage Dockerfiles using Distrosless base images to minimise container attack surface and image size, with automated code quality checks and unit tests integrated into the pipeline.
- Packaged and deployed Kubernetes resources – Deployments, Services, and Ingress – using Helm charts for consistent, versioned, and environment-agnostic application delivery.
- Configured Argo CD to continuously reconcile Kubernetes environments against Git as the single source of truth, ensuring drift detection and automated remediation on every commit.

EDUCATION

Rashtrasant Tukadoji Maharaj Nagpur University
Bachelor of Technology (B.Tech)

2021 – 2025
Nagpur, Maharashtra, India
